

COVID-19 PANDEMIC IDIOM - AN IMPENDING HONOR AND CARE THROUGH PHILATELY ANTHOLOGY

MEHUL MEHTA^{1*} SUSHANT SUD² NILKANTH MARADIA³ SAURABH SINGH⁴

ABSTRACT:

Contagious illnesses have usually been a massive assignment for such a lot of civilizations within side the beyond and that they led to several numbers of demise and massive historic adjustments. Also, such a lot of contagious illnesses that have been concept to be eliminated nonetheless maintain to have mutations and endanger fitness. COVID-19 (SARS-CoV-2) endemic commenced within side the town of Wuhan, China in December 2019 and was an epidemic in a quick time. When we examine the records, we see many different corona virus types (e.g., SARS, MERS) inflicting pandemic. However, the global has felt the staggering impact of this pandemic all through the year 20-21. In the closing 1 and ½ year we've got witnessed devastating pandemic of such enormous proportion in which excessive virulence of Covid 19 virus with none preceding revel in has cause alarming demise rate. The year 2020 and 2021 will make an enduring affect at the records of humankind as it will be remembered as beginning of post-covid era. The Coronavirus has reached its claws into each thing of human activity, and philately isn't any exception. In this context, the focal point of the paper is to familiarize the readers with the range of philatelic troubles associated with COVID-19 emitted through distinctive postal management everywhere in the global which have as situation the Coronavirus infection (COVID-19)

INTRODUCTION

Although the records of pandemic dates again to the length while human domesticated vegetation and animals, it's far assessed from many elements in phrases of unfold procedures and results. The idea of pandemic is described because the smooth and speedy transmission of epidemics inflicting illnesses and deaths in human beings or animals, once in a while to a continent or maybe to the complete globe. Epidemic illnesses have now been no longer unusual place within side the durations while human beings lived in small, remote groups and this modified with the transition of hunter-gatherer societies to everlasting agreement through beginning agriculture. The hunter-gatherer existence persisted till about 10 thousand years ago. [1],[2]

We see that human beings followed a settled existence with the rural revolution. After this stage, radical adjustments and ameliorations had been skilled in human existence. In the settled order of human societies, animal pathogens reached people via approaches like milk, meat, saliva and excrement because the domestication of animals. Pandemics, on the alternative hand, have now no longer been restricted to the deaths of tens of thousands and thousands of human beings, however additionally have fashioned political and social existences and feature brought about historic

adjustments. For this reason, epidemics have to be tested as a social phenomenon affecting many economic, social and diplomatic areas. When a number of the essential pandemics due to the epidemic illnesses are tested historically, the best ones may be seemed as plague (black demise) epidemic in 1,347–1,351 (It is assumed that this epidemic destroyed about 30–50% of the European populace), Smallpox epidemic in 1,520, Spanish flu (influenza pandemic) in 1918–1919 (It is assumed that 1/three of the global populace stuck this sickness and nearly 50 million human beings died), HIV/AIDS, which commenced in 1981 and continues to be continuing, SARS visible in 2002–2003, Swine Influenza Virus (SIV/H1N1) visible in 2009–2010, MERS visible in 2012, and Ebola outbreak visible in 2014–2016. Flu epidemics seem in all global societies with a repetitive and unpredictable characteristic. There have been 3 different essential flu epidemics aside from Spanish flu, that's the best and devastating epidemic, "Asian flu" in 1957–1958 and "Hong Kong flu" in 1968–1969. COVID-19 pandemic, that's skilled because the closing energetic pandemic and maintains its speedy unfold and threat, commenced in Wuhan town of China in December 2019. [3], [4], [5]

This article incorporates scientific philatelic substances used to commemorate critical historic occasions and lift public consciousness

in their wide social impact. As in preceding pandemics, governments have resorted to philately fight and commemorate the epidemic all through the COVID-19 process. Governments have frequently used stamps to suggest their willpower to reassure their human beings, teach and encourage their public fitness practices. To this end, the primary COVID-19 stamp became issued through Iran on 17 March after which through China on eleven May, straight away after the preliminary isolation and identity of SARS-CoV-2. It is visible that each one international location has further posted historic stamps that they talk over with the COVID-19 Pandemic battle in visible reminiscence. In widespread phrases in philatelic substances; doctors, nurses, fitness personnel, scientists, patients, soldiers, police, fire-fighters, virus, symptoms, approaches of safety and precautions to be taken are depicted. Therefore, the stamps used on this article, collectively with different statistics sources, gift the results of a unique length in medicine, art, social and historic fields at the reminiscence of humanity.

The gift takes a look at began out from our modern-day worries concerning the gathering of numerous styles of postage stamps, which includes the ones associated with Coronavirus (COVID-19) infection. This is how we couldn't stand aside, and we got down to comply with

intently what's taking place the world over in this subject, from the attitude of philately and passionate collectors. The effect of this trouble is to elevate cognizance of the seriousness of the scenario that this new COVID-19 brings, understanding that the postage stamp is a messenger of the community. By making use of the postage stamp on mail despatched worldwide, each the workforce concerned in dealing with the mail and the recipient get in contact with the message despatched thru the stamp. Some issuing postal administrations taking gain of the skills of the format designers made a sequence of suggests with unique graphics, the effect most of the viewer being a widespread one. For philatelists, the numerous varieties of format and adjoining philatelic fabric convey the opportunity of a brand-new area of collection, which, as a long way as we will see, is growing. ^{[5], [6], [7]}

Covid-19 Pandemic an era to retain information

Novel corona virus was discovered during the end of year 2019 and labelled as Covid-19. However, the world has felt the staggering impact of this pandemic only during the year 2020 and 2021. In the last 1 year we have witnessed devastating pandemic of such enormous proportion in which high virulence of covid 19 virus without any previous experience has lead to alarming death rate. The year 2020-

21 will make a lasting impression on the history of humankind as it will be remembered as starting of post-covid era.

Covid-19 second wave has swept through India at a pace that has spread over a period of time. It has been unbelievably aggressive with a mammoth mortality in many healthy young adults, making us realize how vulnerable and susceptible we are. During last one year we have learned a great deal many more things of concern, like increased risk of vascular involvement and resulting cardiac, cerebrovascular deaths; severe pulmonary involvement with late manifestations leading to high mortality. There have been covid related long term organ damage and unusual complications like virus triggered diabetes- which would not have been otherwise expected; second is invasive Mucor mycosis associated with covid which may result in serious visual and brain involvement. [8], [9], [10], [11], [12]

Coronavirus (COVID-19) Impacts on Contemporary Philately

An extremely important impression, for the next approaches, which subscribes to the current philately area, is the concept of stamp. As it was natural, the stamp appeared and urbanized over time as a result of prominence common character and behaviours for a

number of processes and phenomena in different areas of commotion.

We tried as much as possible to index all the postage stamps that appeared up to the date of writing this study. There is a high leeway that lately there will be other new postal issues on this topic or there are other issues that were not indexed by our sources until the date of delivery of the material. Based on the identified pieces, scientific annotations were made, mainly related to the description of the postal-philatelic issue. The characteristics in question refer to the date of issue, the size and format of the parts, the way they are arranged for printing, the number of parts (where the information could be found), respectively other data that lie beneath the explanation of issue. [13], [14], [15]

Awareness and Appreciation of Covid warriors through globally published Philately

In living reminiscence, no epidemic has generated a medical, methodical, communal, and opinionated response as enormous, hasty, and worldwide as that of COVID-19, which quickly became a international public health tragedy as documented by the World Health Organization in January 2020. The commemoration of major events takes many forms, including the issuing of postage stamps. It is a mass medium used to commemorate events or raise public alertness about topics of

wide social interest or influence in the form of philately's.

So, here we have carried out a review and evaluation of official postage stamps issued in 2020 associated to the COVID-19 pandemic. We have included only official stamps whose status was verified on postal sites. The article contains health philatelic resources used to venerate important historical events and raise public wakefulness of their broad social force. As in previous pandemics, governments have resorted to philately combat and commemorate the epidemic during the COVID-19 process. Governments have often used stamps to signify their determination to restore confidence in their people, educate and motivate their public health practices. To this end, the initial COVID-19 stamp was issued by Iran on 17 March and then by China on 11 May, immediately after the initial separation and recognition of SARS-CoV-2. It is seen that all countries have similarly published historical stamps that they refer to the COVID-19 Pandemic struggle in visual memory. In general terms in philatelic materials representing; doctors, nurses, health personnel, scientists, patients, soldiers, police, fire-fighters, virus, symptoms, ways of defence and safety measures to be taken are depicted. Nearly 21 countries and the United Nations have released around 68 postage stamps among them to mark

the forfeit of healthcare workforce and patients all through the covid-19 pandemic.

From the point of view of the scrutiny and portrayal of the pieces, the main sites of the postal administrations were used, but not only, the information discovered being of a real use in understanding the whole loom that was in issuing the pieces in question. Thus, in the vast majority of cases, the concerns for issuing the philatelic pieces started from the national situation of the respective states, the number of deaths, as well as the number of Coronavirus (COVID-19) infections being a decisive factor in this regard. But there are also states that, although they have gone through a very serious situation, have not yet sketched any dampers in the sense of issuing postage stamps to support at least the cause of those who fight for the good of the commune and the veracity of the environment. Therefore, the stamps used in this article, together with other data sources, present the effects of a special period in medicine, art, social and historical fields on the reminiscence of humankind is highlighted below in rhetorical manner from Fig.1 to 6: [16], [17], [18], [19], [20]

DISCUSSION & CONCLUSION:

The observable fact of COVID-19 infection is that it has left a significant and irreversible mark on many philatelic events, as well as uphold through philatelic endorsement and the related circulations of the cause of the brawl against the pandemic. What is noteworthy to note is that all postage stamps issued are based on the national situation in respective countries, supporting the encouragement of the fight against the pandemic, as well as in shore up of those in the front line.

The article was aimed to explore the pandemic not only with bodily health approach but also social, monetary and psychological mechanism. This is of great significance since such newsworthy philately is considered not only a collection of nice pieces of stamps, but also signify the edifying olden times, concerns, pride, struggles, achievements, and victory over the enemy. Thus, such a collection has enlightening impact and value which will be carried over centuries in the context of medical history.

Epidemics, which have been seen and reported as a mass threat for centuries in the past of humankind, have caused through deaths and even changes in the history of the world. It was presumed that epidemics which are thought to be eradicated and eliminated from

the world today are seen to persist to threaten people's lives by renewing and multiplying themselves. COVID-19, which is experienced as the last active pandemic and continues its rapid spread and threat till day may be in a dormant yet active stage.

The corona virus seen in 2019 was named as COVID-19(SARS-CoV-2) diverse from the previous known corona viruses. Pandemic, which has much more upsetting and disturbing effects than previous Corona viruses, continues to show its effects and changes not only in the field of health but also in many areas such as economic, social, cultural, demographic, transportation, tourism, sports, arts and education in particular. Nowadays, at the time of this study, the Corona virus (COVID-19) has reached its claws into every aspect of human activity, and philately is no exception. In March-May 2020 period, we have seen nearly every philatelic exhibition in the world either cancelled or postponed, and most countries not issuing new material for the foreseeable future.

As a result here we found that not all over the place and not all indexed shows are accessible to have complete technical information. Most of the times in order to portray philately's we need to go through numerous bibliographic possessions; even so, some aspects remained unearthed. A satisfying aspect of obtaining the

results we were pursuing was the fact that we came across the postage stamps actually disseminated in the postal web circuit. What is noteworthy to note is that all postage stamps issued are based on the nationalized situation in respective places, partisan the backing of the fight against the pandemic, as well as in shoring up those worked hard as a front line warriors.
